

U-SPRAY

Application System

DESCRIPTION :

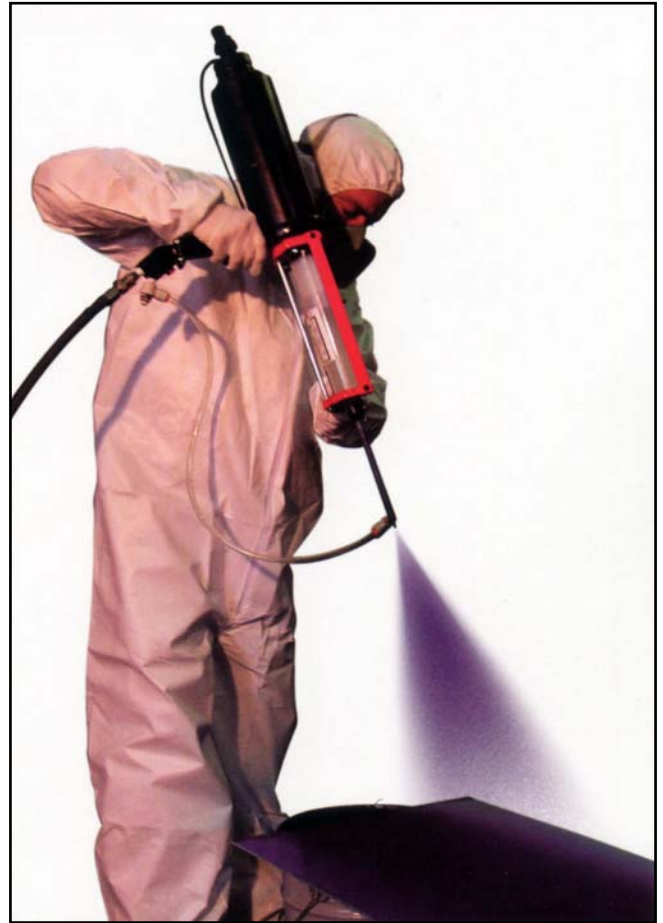

We are extremely pleased to introduce a new, revolutionary application process for all of our 100% Solids Sprayable Polyurethane and Polyurea Coating Systems. This application method consists of a hand held, air supplied pneumatic dual cartridge dispenser complete with a patented spray nozzle and air manifold. The dispenser is surprisingly light weight and easy to use. All you require is an air source.

PRODUCT :

Our 100% Solids Sprayable Polyurethane and Polyurea coatings are packaged in either 300ml x 150ml, 300ml x 300ml, 600ml x 300ml, 600ml x 600ml or 750ml x 750ml cartridges in a sealed, nitrogen purged, foil bag complete with 1 x spray nozzle and 1 x flow restrictor valve. The dual cartridge dispenser is available in several sizes to accommodate the various cartridge dimensions.

APPLICATIONS :

Our U-Spray is ideal for shop and field repairs of elastomeric linings and coatings, and for smaller volume coating jobs. All without waste and clean-up and without the time consuming, expensive use of plural component spray equipment.
